ABDUL GHOFUR ALMIQBADI

Mobile Developer — Flutter / Dart

Yogyakarta, Indonesia · +62 812-0000-0000 · furalmiqbadi@gmail.com · github.com/furalmiqbadi · furalmiqbadi.github.io

PROFESSIONAL SUMMARY

Information Systems student (graduating 2027) who builds offline-first mobile applications with Flutter and Dart. Authored Arkustudio, a five-app productivity suite sharing one encrypted local data core. Practical experience in SQLite/Drift data modelling, AES-GCM encryption, and Material 3 interfaces. Seeking a software engineering internship in mobile or backend development.

TECHNICAL SKILLS

Languages: Dart, Kotlin, TypeScript, SQL

Mobile: Flutter, Material 3, adaptive layouts, local authentication, Android

Data: SQLite, Drift, Supabase, REST APIs, schema migration, query indexing

Security: PBKDF2-HMAC-SHA256, AES-GCM, secure key storage, biometric unlock

Tooling: Git, GitHub Actions, Android Studio, Figma, unit and widget testing

EXPERIENCE

Independent Developer — Arkustudio

Feb 2026 – Present

Personal product suite · Yogyakarta, Indonesia

- Designed and shipped five Flutter applications (notes, tasks, money, habits, calendar) on a shared monorepo core of design tokens, repositories, and services.
- Implemented note encryption where a PIN-derived key (PBKDF2-HMAC-SHA256, 120k iterations) wraps a per-vault AES-GCM data key; derivation runs on a background isolate to keep the interface responsive.
- Modelled a Drift/SQLite schema with versioned migrations and merged events across tasks, transactions, and calendar entries into one indexed timeline.
- Wrote unit tests for money arithmetic and rich-text serialization, and kept *flutter analyze* clean before every build.

PROJECTS

Arkustudio Notes — Encrypted rich-text notes

2026

Flutter, Drift, AES-GCM

- Rich-text editor with checklists, text styles, labels, and reminders; autosave debounced at 500 ms.
- Locked notes decrypt only after PIN or biometric unlock, with an automatic session lock after 60 seconds in background.

Arkustudio Money — Expense tracking and budgets

2026

Flutter, SQLite, Drift

- Multi-account ledger storing amounts in minor units to avoid floating-point drift, plus monthly budgets and category breakdowns.
- Shared design system and repository layer reused across all five apps, cutting new-feature work to the feature module only.

EDUCATION

Universitas Nusantara — Bachelor of Information Systems

2023 – 2027 (expected)

GPA 3.72 / 4.00 · Coursework: data structures, database systems, mobile programming, software engineering

ADDITIONAL

Languages: Indonesian (native), English (professional working proficiency)

Certification: Flutter Application Development — Dicoding, 2025

Availability: Full-time internship, on-site or hybrid, from January 2027
